

AutoPilot M6-WMQ, VERSION 6.7.2.3 E-FIX Hot Fix 2 for Multiplatforms

(C) Copyright Nastel Technologies, Inc. 2020

```
=====
Subject    : 6.7.2.3 Hot Fix 2 for Multiplatforms
Date       : 10-Sept-2020
File       : M6WMQ_6.7_MULTI_PLAT_EF2.3.hf2.zip
Includes   : M6WMQ_6.7_MULTI_PLAT_EF2.3.hf2.txt -- this readme
              WGS_10.1.4.31.pkg                -- Workgroup Server 10 Expert
              navigator.war                    -- Navigator GUI
              navigator-server.war            -- Navigator Web
```

IMPORTANT:

This Hot Fix MUST be applied to build 6.7.2.3 of M6-WMQ.

If this is your first install for 6.7.2.x, you can unzip your platform package and then this package over the top before running pkgman, updating databases, and replacing the web applications.

If you previously installed 6.7.2.x, unzip this package and run pkgman, then update the web applications. No Database updates are required.

Prerequisites:

M6-WMQ 6.7.2.3

INSTALLATION:

- 1) Stop CEP instances
- 2) Install WGS_10.1.4.31.pkg package file
- 3) Start CEP instance
- 4) Stop Tomcat
- 5) Deploy both war files to Tomcat webapps
- 6) Restart Tomcat

Fixes:

Nastel Navigator HTML WebGUI

- 0023482: [Messages] when browsing messages with multiple pages of results, the message shown is incorrect
 - 0023473: [Queues] pressing refresh on console causes related local queues viewlet to also refresh
 - 0023474: [Manager] Add ping queue manager action
 - 0023472: [Feature] Provide view of authority records
 - 0023467: [Queues] find should never include SYSTEM objects
 - 0023451: [Bug] Topology should not exclude queues without message when view is related
-

Nastel Navigator Workgroup Server

0023488: [WGS] Improved WGS performance with large environments and state logging updates
